

PR #11: Story/tw-69

Date	1 Apr 2024
Author	@Nanyu Chen
Reviewer	@xueshuo li
PR/ Branch	PR #11: Story/TW-69 Login auth
Status	APPROVED
Number of Conversations	10

Code Changes

Changes Made:

- Store the JWT token in localStorage upon successful login.
- Decode the jwt and extract user role information based on the user role.
- Display the relative pages based on user roles.
- Prevent users from accessing pages of other roles without proper permissions.
- Clear user's JWT token in localStorage, when user logout.
- Remove dark mode.
- Save token to local storage

General Comments

- Use git rebase to sync the dev into featured branch
- Avoid using the same variable name

Specific Comments

File	Line Number	Comment	Following Action
src/tt-frontend/src/app/choose-role/page.tsx	17 to 28	Avoid using the same variable name (in line 25, const roles, same name to state roles)	Changed the variable name, make them more specific.

Conclusions

-  Avoid using the same variable name
