PR #7: Story/tw-65

| Date	1 Apr 2024
Author	@Dongning Li
Reviewer	@xueshuo li
PR/ Branch	PR #7: Story/TW-65-based-on-the-user-role-information-in-token-display-different-ui-navigate-to-corresponding-url-path
Status	APPROVED
Number of Conversations	21

Code Changes

Changes Made:

- Require username instead of email when login
- Auth user after clicking login and return role as string|string[] to the current page
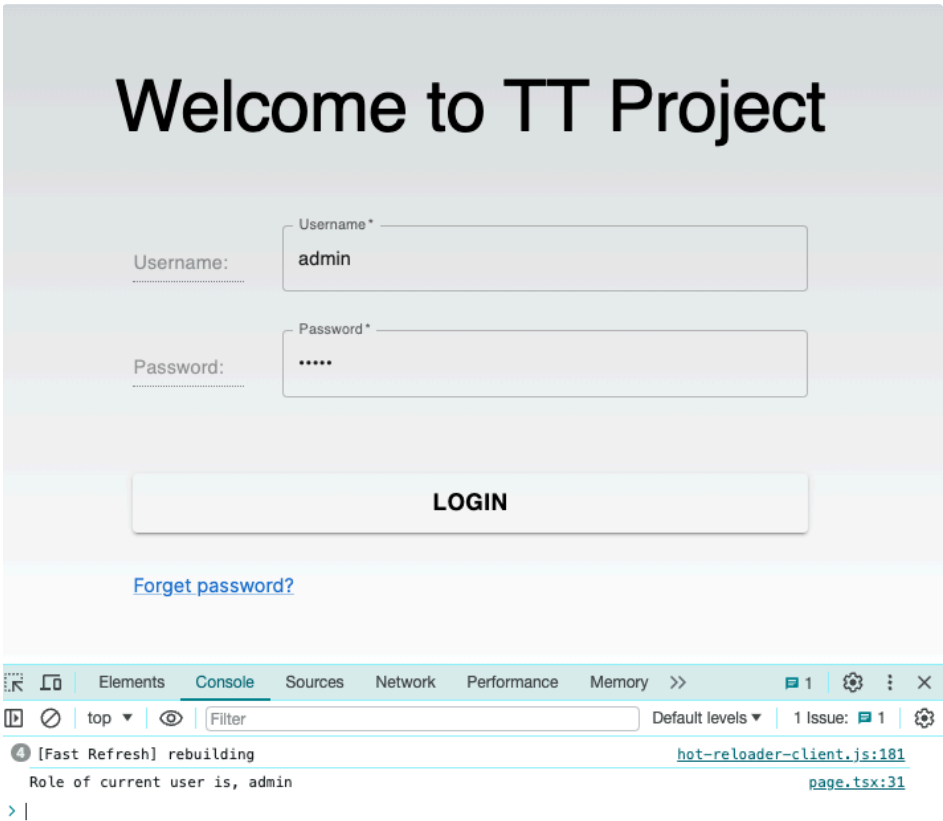

- Save token to local storage
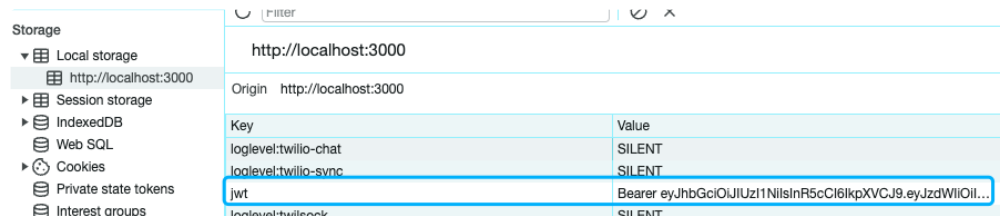

General Comments

- Use git rebase to sync the dev into featured branch
- Only update file that certainly made changes
- Change file hierarchy
- Rename some functions

Specific Comments

File	Line Number	Comment	Following Action
src/tt-frontend/src/components/LoginComponent.tsx	48-51	Change console.log() to alert() when you want to show error message	Keep. Not a key function, keep console to avoid impacting user experience
src/tt-frontend/src/components/LoginComponent.tsx	26-29	When saving to localStorage, you don't have to add "Bearer " as prefix	Accepted. Previously required by backend, remove it as required by scrum master.

✏️ Conclusions

🔀 Extract logic into one function with a meaningful name

🔀 Upload files only been modified
